

THE
SQOOM
EFFECT

Advanced skincare
technology for
anti-ageing and
medical treatment.
Scientifically
tested.

The SQOOM Effect.
Advanced technology for
firm and healthy skin.

THE
SQOOM
EFFECT

When using SQOOM, valuable active ingredients are transported into the deeper layers of the skin, targeting the precise areas where treatment is required.

The SQOOM EFFECT is based on the use of innovative, highly developed gels. Due to their precise molecular size and polarity the active ingredients are transported into the various layers of the skin to the exact point where they are needed.

Conventional cosmetics are traditionally applied to the skin using the finger tips and are only absorbed by the upper skin layer. However, the roots of skin ageing and other skin problems are found deeper inside the skin.

Much deeper, in skin and tissue layers that conventional cosmetics cannot reach.

SQOOM transports valuable active ingredients deep into the skin using a transducer which produces one million soft vibrations per second.

Innovative bio-molecular preparations made of thermal, mechanic and physiochemical components result in a highly complex effect in their combination with the micro-computer controlled SQOOM device.

SQOOM stimulates production of the skin's own anti-ageing and healing properties.

SQOOM massages the epidermis (upper skin layer) as well as the dermis (lower skin layer). It also gently stimulates the muscular tissue under the skin, targeting problem areas.

Through the use of SQOOM, the skin is supplied with nutrients and oxygen, the blood circulation in the vessels is increased, fat cells are diminished and the skin becomes firmer. Also, the lymphatic system is stimulated, as is the production of collagen and the regeneration of cells and cell division. Due to the initial intro-

duction of bio-molecules, the skin is encouraged to regenerate itself, becoming more elastic and more more elastic and rejuvenated.

SQOOM significantly improves the skin's own production of collagen and elastin, sustainably improving the skin's structure, regenerating problem skin and improving the overall appearance of the skin – making it brighter, firmer and more youthful. These results occur within a very short time frame. With longer term use, the effects are even more pronounced.

It connects the iontophoresis with ultrasound (sonophoresis) in a unique way. In other words: The ultrasound is the doorbell, and the iontophoresis subsequently opens innumerable doors. And that happens one million times in each second.

The skin structure is improved sustainably, problematic skin regenerates and the skin's appearance soon becomes healthy and fresh.

The SQOOM Effect.
Completely individual.
Dermatologically
proven.

Skin ageing is a result of the gradual reduction of the body's own natural moisturiser, hyaluronic acid. It is hyaluronic acid that stabilises the elastic and collagen fibres of the skin, and protects the cells against free radicals.

ONCE

a week.
For visible
success.

SQOOM replenishes this moisture reserve. While you can only reach the upper skin layers with conventional cosmetics, SQOOM EFFECT works deep inside your skin, replenishing, revitalising and refreshing with no need for a scalpel or needle. SQOOM is quick, easy and gentle yet highly effective.

The SQOOM success: With scientific precision, highly effective ingredients reach exactly where they are needed.

xcential hyaGel

This innovative anti-ageing gel contains 100 % skin friendly, natural, active ingredients. Small Hyaluronic acid particles of low molecular weight are transported to the deep layers of the skin where they fill the hollow spaces caused by the ageing process. Now with new active ingredients, the improved formula better protects against free radicals and provides intensive moisturisation.

cleanser

The optimal first stage of the physical SQOOM treatment process, the cleanser prepares the skin with an intensive deep clean which provides moisture and removes impurities. Ideal for inflammatory and problem skin areas.

DeSpot

Due to its unique combination of active ingredients, DeSpot is able to prevent and block age spots, to brighten skin areas, regenerate and reconstruct already aged skin and tighten the connective tissue. DeSpot helps counteract symptoms of old age through cell regeneration, detoxification and by capturing free radicals.

The innovative SQOOM concept for skin problems and sensitive skin.

Unlike conventional creams and gels which are applied to the skin with the finger tips or palms, the SQOOM concept transports high-quality active ingredients deep within the skin – into tissue layers which conventional creams cannot reach.

Using its unique synchron technology and a million gentle vibrations per second, the ingredients are transported to the precise area where they are needed to target the source of skin conditions, before they develop.

When the innovative bio-molecular SQOOM gel preparations made of thermal, mechanical and physio-chemical components, are used in combination with the micro-computer controlled SQOOM device, the results are highly effective and skin health is successfully restored.

After just a few applications, noticeable results are achieved.

The highly specialised SQOOM med Gels provide what they promise.

- For impure, oily skin as, for example, typical in cases of acne.
- For deeply effective massage in case of back- and muscle tensions.
- For dry, irritated skin as, for example, typical in cases of neurodermatitis.
- For dry, scaly skin as, for example, typical in cases of psoriasis.
- For reddened skin as, for example, typical in cases of rosacea and couperose.
- For scars as, for example, typical in cases post operation and injury.

The SQOOM Effect cream
for daily care.

With the active ingredient Argireline
which sustainably reduces wrinkle
depth by up to 50%

xcentialSkinCare^{ONE}
AntiAge for impure, oily skin.

The innovative active ingredient Sebaryl normalizes sebum production and keeps the lipid layer of the skin flexible and elastic. It also significantly diminishes the loss of moisture through the skin.

Argireline, a new patented active ingredient, works like botulinum toxin. It is soft, does not have to be injected, and does not cause any toxic reactions. Studies and laser measurements prove that Argireline sustainably reduces the depth of wrinkles by up to 50%.

xcentialSkinCare^{TWO}
AntiAge for normal, dry skin.

With the regenerating effect of grape seed oil and wild rose oil, this cream keeps the lipid layer of the skin flexible and elastic due to a high share of unsaturated fatty acids. Jojoba oil, a plant lipid, helps smooth the surface of the skin.

Argireline, a new patented active ingredient, works like botulinum toxin. It is soft, does not have to be injected, and does not cause any toxic reactions. Studies and laser measurements prove that Argireline sustainably reduces the depth of wrinkles by up to 50%.

Rent a SQOOM. And experience the SQOOM Effect now.

Test SQOOM in the comfort of your own home for either two or four weeks with our attractive SQOOM trial offer.

If you like the results and decide you want to keep your SQOOM forever, we simply deduct the rental fees off your final payment. It couldn't be simpler.
